PROFESSIONAL SUMMARY

Software Engineer specializing in backend architecture, with hands-on experience building production ready-applications. Skilled in Node.js, TypeScript and PostgreSQL, with a demonstrated ability to design scalable RESTful APIs, model complex relation data and securely integrate payment gateways. With a strong full-stack perspective, I ensure seamless integration between resilient backend systems and responsive user interfaces.

CORE TECHNICAL SKILLS

Backend & Infrastructure: Node.js, Express.js, RESTful APIs, Message Queues (BullMQ), Background Jobs, Cloudinary, Firebase, Google Cloud Platform, Redis Caching

Testing & Tools: Postman (API Testing) Swagger (API Documentation), Git, Github, Railway

Mobile & Web Development: React Native, Expo, Cross-platform Development, React, TypeScript

Architecture & Patterns: Component Based Architecture, Modular Monolithic (Backend), Hooks Pattern

State Management: React Context API (Global state)

Database & ORM: Relational Database (PostgreSQL), Prisma

Security: JWT Authentication, OAuth 2.0, Secure password hashing (bcrypt), Role-based access control

Additional: WebSockets, Push Notifications, Geolocation Services and API, Payment gateway Integration

PROFESSIONAL EXPERIENCE

Backend Engineer | *ImpulseCraft* | Jan 2026 - Apr 2026

Lagos, (remote) Nigeria | Built an application connecting tourists to tour guides

- Architected a real-time tour guide marketplace backend using Node.js, Express, and PostgreSQL to handle high-concurrency booking requests.
- Built out the admin dashboard and backend infrastructure to streamline platform management and administrative oversight.
- Developed a dynamic pricing algorithm for robust tour fare-calculation engine that computes trip costs based on server-side Google Maps route metrics (distance and duration), multi-stop itineraries, and travel-mode multipliers.
- Implemented a high-performance caching layer using Redis to store frequently accessed, static tour location data, significantly reducing PostgreSQL database load and accelerating API response times.
- Built a secure, bidirectional GPS tracking system using Socket.io, utilizing isolated, room-based WebSocket channels (tourId) to broadcast live coordinate updates strictly between matched users.
- Designed a custom security layer generating randomized, one-time start codes (OTP) sent via email, requiring validation at the REST endpoint before initiating start of tour and timer for additional billing.
- Implemented background job processing using Redis and BullMQ to reliably queue automated emails and asynchronously handle payment webhooks.
- Technologies: TypeScript, Node.js, Express, PostgreSQL, Socket.io, Google Maps API, JWT, Cloudinary, Railway, Git, Github, Payment Integration, Redis.

Backend Engineer | *Choweazy* | Oct 2025 - Jan 2026

Warri, Nigeria | Built a hyper-local food delivery ecosystem connecting customers, vendors, and riders

- Engineered a multi-platform solution consisting of a Customer progressive web App, Vendor App and a dispatch app using React Native (Expo), creating a seamless marketplace that connects local restaurants with consumers in the Warri metropolis.
- Designed and built a Node.js/Express backend handling order lifecycle management, transaction validation, and commission automation.
- Deployed and maintained backend services on Railway to ensure high availability.
- Utilized Redis caching for high-frequency menu queries, handling order lifecycle management.
- Integrated secure payment gateway infrastructure with transaction verification and failure-handling logic
- Engineered a dedicated React Native app for restaurant partners featuring real-time order acceptance (via WebSockets), menu management (CRUD), and an earnings dashboard that shows amount vendors make upon successful delivery of orders.
- Designed a Node.js/Express transactional backend that automates the business logic, instantly calculating and splitting the 15% vendor commission and a platform fee per order, ensuring zero-discrepancy financial records.

- Implemented a relational-style Postgresql schema with prisma to model complex relationships (Users ↔ Orders ↔ Vendors), enforcing data integrity and using Role-Based Access Control (RBAC) to secure the distinct API endpoints for customers, vendors, and admins.
- Technologies: React Native, Expo, React.js (PWA), TypeScript, Node.js, Express, PostgreSQL, Socket.io, Google Maps API, JWT, Cloudinary, Railway, Git, Github, Payment Integration, Redis.

Frontend Engineer | *Ticketeer-Africa* | Aug 2025 - Oct 2025

Lagos (remote), Nigeria | Built a seamless digital ticketing and event management platform

- Spearheaded the client-side development of the ticketing platform, transforming design concepts into responsive user interfaces that handle event discovery, ticket purchasing flows, and user profile management with high fidelity.
- Engineered robust frontend-to-backend integrations, ensuring efficient data fetching and state synchronization while occasionally extending to be backend to fix little bugs.
- Integrated and optimized 10+ RESTful API endpoints, implementing proper error handling, retry logic, and caching strategies with Provider state management, improving app responsiveness by 35%.
- Partnered with cross-functional teams to define the MVP roadmap, aligning technical frontend deliverables with marketing launch timelines and contributing strategic insights to the product rollout plan.
- Championed a disciplined Git/GitHub workflow, managing branch strategies and conducting code reviews to resolve merge conflicts and maintain a clean, production-ready codebase within a team environment.
- Technologies: ReactJs, TypeScript, Node.js, Postgresql, Railway, Cloudinary, Payment Integration

Frontend Developer, Intern | *Happy Equipment Limited* | March - May 2024

Port-Harcourt, Nigeria | Full-stack development internship at a leading financial services institution.

- Designed and developed a high-performance corporate website that serves as the central digital hub for the company's engineering operations, professionally digitizing their Service Portfolio and Heavy Equipment Inventory to enhance B2B client engagement.
- Structured a complex catalog of industrial services and equipment categories, implementing intuitive filtering and navigation patterns that streamline the user journey for potential clients seeking technical specifications.
- Collaborated closely with the Quality Assurance team to translate business requirements into technical deliverables, conducting rigorous cross-browser testing and debugging to ensure a fault-tolerant, bug-free production.
- Implemented advanced frontend optimization techniques (including image compression and lazy loading), achieving optimal load times and high Lighthouse performance scores to support users on varying network speeds.
- Technologies: JavaScript Node.js, Figma, Git, Github

Frontend Developer, Intern | *SkySenx Limited* | June - August 2024

Warri, Nigeria | Intensive internship focus on modern frontend architecture and professional workflows

- Rapidly acquired proficiency in core frontend technologies (React.js, HTML5, CSS3), transitioning from theoretical concepts to practical application within a fast-paced development environment.
- Developed a series of responsive, component-based web prototypes to master React architecture, implementing reusable UI components and ensuring mobile responsiveness across different screen sizes
- Integrated into the engineering team's workflow, adopting industry-standard practices for Code Organization, Git Version Control, and collaborative development, moving beyond individual coding to team-based contributions.
- Optimized API consumption and backend communication using react context for state management implementing request caching.
- Technologies: React.js, JavaScript (ES6+), HTML5, CSS3, Git, GitHub, VS Code, Responsive Design Principles.

EDUCATION

- **BSc Computer Science** - Covenant University, Nigeria (4.25)

COMMUNITY

- **GDG Frontend Track** @ Covenant University (October 2023 - March2025) -Actively participated in a thriving developer community of 100+ students, engaging in weekly technical workshops and hands-on coding sessions.
